

## Rescreening a Screen Failed Subject

If a subject was ineligible for a protocol and is rescreening on the same protocol, do not update the original screen failed entry. Instead, follow these steps to create a new entry in OnCore.

### Subject Console

In the Subject Console for the original screen-failed entry, select the Demographics tab.

|                             |  |
|-----------------------------|--|
| ★ Subject Console           |  |
| Protocol No.: TRAIN00000001 |  |
| Subject MRN: CM1234         |  |
| Switch Subject              |  |
| Summary                     |  |
| Demographics                |  |
| Consent                     |  |
| Eligibility                 |  |
| On Study                    |  |

### Demographics Tab

Click the Update button at the bottom right of the screen. In the Subject MRN field, add an “SF” (for screen failed) at the end of the MRN.

|                             |                                         |
|-----------------------------|-----------------------------------------|
| Subject Demographics Update |                                         |
| Subject MRN*                | WW1234SF                                |
| Last Name*                  | Wildcat                                 |
| Birth Date*<br>(MM/DD/YYYY) | 01/01/1960                              |
|                             | Approx? <input type="checkbox"/>        |
|                             | Not available? <input type="checkbox"/> |

The subject can now be entered for rescreening in OnCore using the Register Subject tab in the CRA Console.
