

THE UNIVERSITY OF ARIZONA
MEL & ENID ZUCKERMAN COLLEGE OF PUBLIC HEALTH
**School of Health
Professions**

Genetic Counseling Graduate Program

PRESENTS

Genetics and Genomics Grand Rounds

November 12th | 4 – 5:00 pm | HSIB 880/Zoom

<https://arizona.zoom.us/j/82111906496>

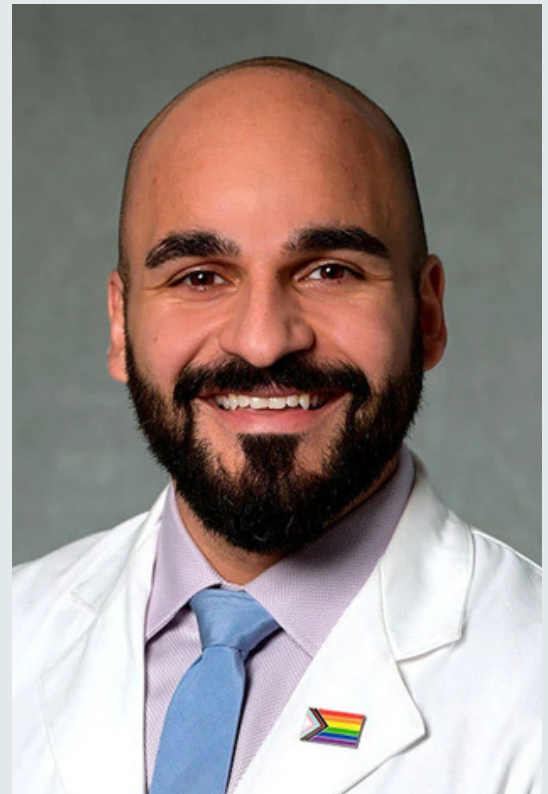

Telephone: 602-753-0140 | Meeting ID: 821 1190 6496

Speaker Host: Esteban Symonds, MD | esymonds@arizona.edu

Contact: Reem Parra | reemparra@arizona.edu

Genetics in adult ICU care

Teddy Drivas is a Clinical Geneticist and an Assistant Professor of Medicine at the University of Pennsylvania in the Division of Translational Medicine and Human Genetics where he serves as the Assistant Director of Scientific Outreach for the PennMedicine BioBank. Through his clinical work, focusing on the care of adult patients with known or suspected genetic conditions, he has established himself as a dedicated advocate for the advancement of genetic testing in adult populations to improve patient outcomes and combat disparities and inequities in genetic medicine. Outside of the clinic, the Drivas Lab is engaged in pioneering research at the intersection of common and rare disease genetics, leveraging the latest in informatic, molecular, and translational research techniques to elucidate the complex genetic architecture that underlies human disease. The lab focuses on identifying and validating genetic pathways and interactions that act together to perturb fundamental cellular processes important to human health, with a particular focus on the complex cellular organelle known as the primary cilium and its involvement in both rare syndromic and common complex disease pathogenesis.

Theodore Drivas, MD,PHD

Co-Director, UPenn HHT Center of Excellence
Assistant Director of Scientific Outreach, Penn Medicine BioBank
Assistant Professor of Medicine (Translational Medicine and Human Genetics)
Assistant Professor of Medicine in Genetics
